We have received your withdrawal request. Your temporary submission identifier for this withdrawal is: submit/6936526.

You may update your withdrawal at: <https://arxiv.org/submit/6936526>

Your withdrawal is scheduled to be announced at Thu, 30 Oct 2025 00:00:00 GMT. The abstract will appear in the subsequent mailing as displayed below, except that the submission identifier will be replaced by the official arXiv identifier. Updates before Wed, 29 Oct 2025 18:00:00 GMT will not delay announcement.

If you have a problem that you are not able to resolve through the web interface, contact help@arxiv.org with a description of the issue and reference the submission identifier.

\\

In this paper, we consider the problem of finding dense intrinsic correspondence between manifolds using the recently introduced functional framework. We pose the functional correspondence problem as matrix completion with manifold geometric structure and inducing functional localization with the L_1 norm. We discuss efficient numerical procedures for the solution of our problem. Our method compares favorably to the accuracy of state-of-the-art correspondence algorithms on non-rigid shape matching benchmarks, and is

especially advantageous in settings when only scarce data is available.
