

S.V.E. Meta-License v4.0 — Proposing a GPL-SVE copyleft patch | «GPL4IdeasOnSteroids» | S.V.E.++

Hello Richard,

Thank you for the GPL++.

I found "a bug in Free+": copyleft protects the source code, but leaves underlying human ideas, ontologies, and concepts open to asymmetric corporate exploitation.

I have created a "patch": the S.V.E. Meta-License v4.0. It extends copyleft principles to human ideas, enforced by radical symmetry and zero secrecy. Patch released on 01.04... ironic day for fixing perhaps the "last bug".

I would like to propose this as a basis for an official patch/addendum to the GNU ecosystem — a GPL-SVE Patch — to safeguard open knowledge in the era of asymmetric Large Language Models and corporate knowledge aggregation [0-Secrecy, Symmetry, Audit, Integrity + What is relevant but I have not thought of? = "Socratic Tail"].

Human Knowledge should be a public good and NOT weaponized by one group against another. If interested, potential release dates might be:

- 09.11.2026 09:09 CET [Fall of the Berlin Wall]
- 26.12.2026 00:01 Moscow Time [Dissolution of the Soviet Union]
- 08.08.2026 08:08 CET [8 - rotated infinity as a symbol that Human Creativity is limitless and above greed]
- 11.11.2026 11:11 CET | 25.12.2026 11:12 CET [New Era for Homo Sapiens]
- ?

Additionally, I propose founding the GNU-SVE Scientific Conference&Journal, where ALL articles and datasets must be published strictly under the GPL-SVE Patch License to eliminate corporate data concealment in science, and BS [!] = non-reproducibility with 0-relevance. I propose organizing the inaugural conference in Berlin—the historical site where physical walls were broken—so we can finally dismantle the mental and institutional walls enclosing Human Knowledge. The repository already contains my Open Letters to the Academy from 2025 laying the groundwork for this. All terms, names, and rules will be governed dynamically by the Community through a GNU-SVE DAO [+ What is relevant but I have not thought of? = "Socratic Tail"].

The project and the manifesto are published here:

<https://codeberg.org/skovnats/SVE-Systemic-Verification-Engineering>

NOTE: I gave up all rights, and everything within S.V.E. belongs to Humanity (conditioned to use with integrity and for good).

Any feedback, guidance, and/or thoughts on this integration would be invaluable.

Please treat these preprints and repositories as beta-version releases. They are not perfect, as I have likely reached the structural limits of what a single engineer can produce under severe operational constraints. To break through these limitations, I actively operationalized large language models [often hacking the censorship and other filters], forcing them to serve as a cognitive exo-skeleton to accelerate the drafting, formalization, and LaTeX compilation of S.V.E. [as explicitly disclosed in the papers] + help identify "Socratic Tails". I systematically turned the corporations' own asymmetric computing tools against their opacity to build this open architecture. I kindly ask you to look past the resulting rough edges and focus on the core framework.

In solidarity,

Dr. Artiom Kovnatsky

Re: S.V.E. Meta-License v4.0 — Proposing a GPL-SVE copyleft patch | «GPL4IdeasOnSteroids» | S.V.E.++

I am not on vacation, but I am at the end of a long time delay. I am located somewhere on Earth, but as far as responding to email is concerned, I appear to be at the edge of the solar system.

After your message arrives at gnu.org, I will collect it in my next batch of incoming mail, some time within the following 24 hours. I will spend much of the following day reading that batch of mail and will come across your message at some point. If I write a response immediately, it will go out in the next outgoing batch--typically around 24 hours after I collected your message, but occasionally sooner or later than that. Please expect a minimum delay of between 24 and 48 hours in receiving a response to your mail to me.

If your message is hard to understand or responding takes real work, the response could take longer.

So please wait 48 hours after sending a message before you resend it, remind me about it, or ask if I have received it. If it has been less than 48 hours, the absence of a response from me only means you have not given me time to answer.

If you are having a conversation with me, please keep in mind that each message you receive from me is a response to the mail you sent 24 to 48 hours earlier, and when writing it, I probably had not yet downloaded your later mail.

If you do not wish to receive this message ever again, please send a message to rms-autoreply-control@gnu.org with the subject "OFF".

Otherwise, you might receive a reply like this one up to once a month.

Fixing (perhaps) the Root Bug of Cybernetics on Axi[0|1]m 0's Level: From GNU to ADAM & EVA | A Quick Followup

Dear Richard,

A mathematician can live in a world of absolute logic, but if Axiom N^º0 contains a hidden bug, the entire deductive closure collapses.

For forty years, the Free+ Software movement has fought for the freedom of code. But this code executes on proprietary silicon—chips with embedded backdoors, untrusted microcode, and corporate logic. You escaped the university bureaucracy to save GNU, but the software remains trapped in a corrupted material matrix. This is the uncorrected bug in your movement's baseline equation = Axiom 0 level-bug.

True Freedom is not just copyleft code. It requires a closed, self-sustaining loop: our own verified open-source silicon factory (**ADAM**) and our own immutable epistemic code & finance [!] bank (**EVA**). ADAM = bones/skeleton, EVA = blood/transactions.

The corporate tech monopoly chose a bitten apple as its sigil—the ultimate symbol of

subversion and the fall into closed, guarded knowledge. We are building **ADAM**: a computing architecture with a whole, unbroken apple. It represents a system that refused the corporate temptation, remaining in a state of absolute, verifiable transparency. In this architecture, the knowledge & finance bank (EVA) serves the sovereign core (ADAM), not the other way around.

We do not need to patch a broken ecosystem. We must deploy a clean Axiom 0. I believe that the mathematics of truth demands its own silicon & bank [!]. Otherwise we are like teenagers that uprising against "parents" who feed them with "idealistic ideas about better world while not being able to provide ourselves". I believe one needs to build a better world ...and what do you think? I

Respectfully,

A.

Operational Vision Vector: [ADAM & EVA]++ | Final Followup

Dear Richard,

To close the architectural loop: Axiom 0 requires not just conceptual autonomy, but a massive physical beachhead.

If we establish a World Hub of Free Fundamental Technologies on a sovereign, non-Western territory (e.g., leveraging existing independent hardware infrastructures in the BRICS+ / Global South matrix = Russia, for example), the entire geopolitical balance shifts.

By delivering **ADAM**—an open, SVE/CGS-verified hardware architecture entirely free of corporate backdoors—and **EVA**—the open-source finance and code bank—we do not just build a local alternative. We create a global standard. Foreign governments, schools, and independent institutions will queue for this stack because it offers something the Western monopolies can never provide: mathematically provable, verifiable transparency.

We break perhaps the dictate of "nanometers" by cleaning the silicon from proprietary bloatware, corporate telemetry, and hidden microcode.

This is my final transmission on this matter; I will not disturb you further and will await your feedback when the time is right.

Respectfully,

A.
