

Dear arXiv Support,

My submissions, **submit/6929089** ("S.V.E. 0 (1)...") and **submit/6929352** ("S.V.E. 0 (2)..."), were recently listed as "*on hold*" but have since disappeared from my submission list.

I have not received any email notification regarding a change in their status (e.g., declined or approved), and I have already checked my spam folder.

Could you please confirm the current status of these submissions and re-send any relevant moderation emails?

Additionally, I would like to ask whether the removal might be related to **sensitive political aspects** referenced in the manuscripts. If so, please confirm so I can prepare revised versions excluding or adapting any parts that may be considered inconsistent with arXiv's moderation policies.

From my perspective, **Academia should remain the moral and intellectual Lighthouse of Humanity**. If scientists refrain from addressing complex societal and political questions, such space risks being dominated by propaganda and emotion rather than **reason**. Precisely these challenging subjects are where rigorous verification frameworks — such as my proposed **Systemic Verification Engineering (S.V.E.)** methodology — can provide value by ensuring objectivity and reproducibility.

Please note that I am **not asserting any ideological position** but proposing a **reproducible methodology** that dynamically adapts thesis probabilities in light of new evidence (posterior probabilities). Anyone can challenge the results by **replicating the method** and supplying their own data for recalculation.

It is, therefore, an **invitation to scientific dialogue**, not advocacy of a viewpoint.

Isn't that precisely what science is meant to do? If I am misunderstanding the boundary, please kindly clarify — I would genuinely appreciate your guidance.

Please regard these reflections not as criticism of moderation but as legitimate questions for the scientific community:
If not us, then who should explore and verify the difficult aspects of human reality?

I would also be happy to **collaborate or adapt the methodology** to align fully with arXiv's editorial standards while preserving its scientific and ethical essence.

Thank you very much for your time and consideration.

Sincerely,

Artiom Kovnatsky
