Dear OSF Support Team,

Thank you for your response. As instructed, I have completed the **"Account Disabled or Falsely Flagged as SPAM"** reporting form. Please find the screenshots of the submitted form attached to this email for your records.

Regarding this case, I require clarification on the following points to understand the nature of this "anomaly" in the context of my professional and scientific work:

1. **Pre-emptive Flagging:** My account was deactivated before a single file, project, or preprint was uploaded. On what technical or behavioral grounds was a clean account flagged as "SPAM" prior to any platform interaction?
2. **Origin of Action:** Was this deactivation triggered by an automated heuristic (algorithmic) or was it a manual intervention by a moderator?
3. **Procedural Delay:** Your initial automated response promised a resolution within 48–72 hours. Why did it take **over 38 days** and a second reminder to receive this follow-up?
4. **Institutional Standing:** Please note that this account represents a registered German business entity (**Wirtschafts-ID: DE405667512**). Treating a verified scientific and commercial ID as "SPAM" without cause or communication constitutes a significant disruption to my professional activities.

Under **GDPR (DSGVO) Article 15**, I also reserve the right to request access to the specific data and logic used to make this automated decision regarding my account status.

I look forward to your response within the stated 48–72 hour window.

Best regards,

Dr. Artiom Kovnatsky

Independent Researcher | Systems Architect Wirtschafts-ID: DE405667512 (Berlin, Germany)

Account Disabled or Falsely Flagged as SPAM

The OSF is always growing and developing. One of those areas of development is our efforts against SPAM. The OSF uses many fluid SPAM filters, taking countless factors into account, and are constantly evolving with trends in the dark world of SPAM. Unfortunately, because we take this seriously, some actual OSF users can get caught in these spam filters. If you believe your account has been wrongly deactivated, please fill out this form below and we will investigate your account.

Provide a quick 5 sentence summary of the Research you are involved in. *

1. My research involves the development of Systemic Verification Engineering (S.V.E.), a methodology designed to audit systems and reduce hallucinations in Large Language Models.
2. I am currently proposing VKB-Training (Verified Knowledge Base Training), which introduces epistemic metadata tags to large datasets to differentiate between facts, hypotheses, and models.
3. This work aims to establish a logically consistent and transparent AI infrastructure by integrating formal logical filters into the training pipeline.
4. As an independent researcher based in Berlin, I am utilizing OSF as a repository for preprints and open source methodologies.
5. My academic background and ongoing submissions (e.g., arXiv:submit/7445251) require a verified platform for long-term archival standards.
