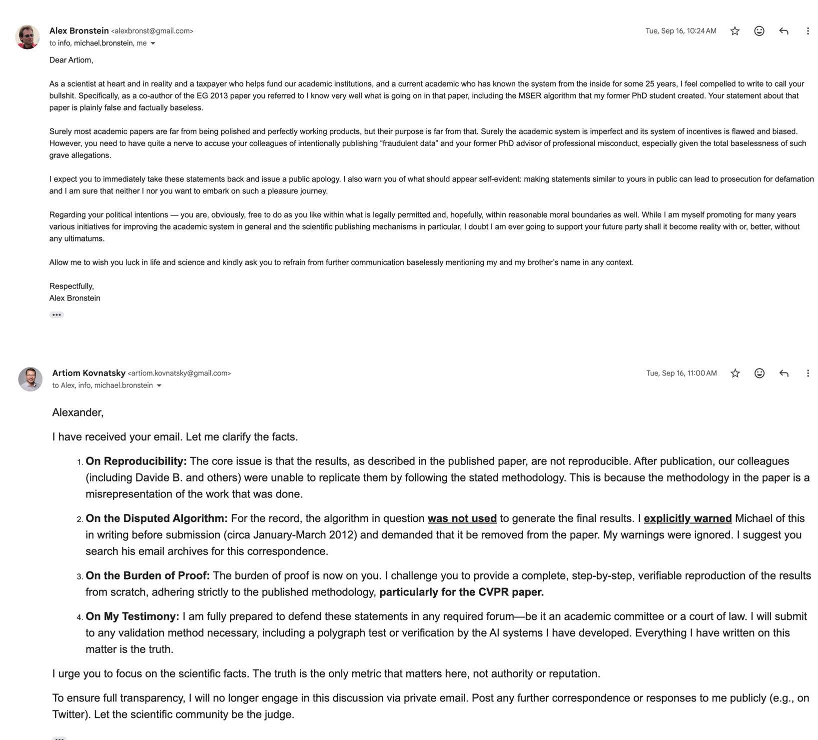
(The number 44 = 33 + 3 + 8 — a Biblical pattern of completion, transition, and renewal.)
Date: October 30, 2025
Location: Berlin

Dear colleagues,
Dear Professor Michael M. Bronstein,
(I refer to you here merely as a symbolic representative of the current Academic System),

Forty-four days have passed since my public confession and call for systemic academic reform.

As a reminder, here are the original letters:
1. 16.09_A Public Confession of Academic Fraud & A Demand for Systemic Reform - artiom.kovnatsky@gmail.com - Gmail.pdf
2. 17.09_The Solution_ A Protocol for Reform in Science and Society - artiom.kovnatsky@gmail.com - Gmail.pdf
Related attached files:
academia_steps.pdf
Initial_Idea_SYSTEM-PURGATORY.pdf

In those forty-four days, no meaningful action was taken. I was accused of "lying" by Prof. Alexander M. Bronstein, was suggested to "seek mental help", and was blocked. Ignoring my call for providing proof (code + data) until this day.



Alex Bronstein <alexbronst@gmail.com>

Dear Artiom,

As a scientist at heart and in reality and a taxpayer who helps fund our academic institutions, and a current academic who has known the system from the inside for some 25 years, I feel compelled to write to call your bullshit. Specifically, as a co-author of the EG 2013 paper you referred to I know very well what is going on in that paper, including the MSER algorithm that my former PhD student created. Your statement about that paper is plainly false and factually baseless.

Surely most academic papers are far from being polished and perfectly working products, but their purpose is far from that. Surely the academic system is imperfect and its system of incentives is flawed and biased. However, you need to have quite a nerve to accuse your colleagues of intentionally publishing "fraudulent data" and your former PhD advisor of professional misconduct, especially given the total baselessness of such grave allegations.

I expect you to immediately take these statements back and issue a public apology. I also warn you of what should appear self-evident: making statements similar to yours in public can lead to prosecution for defamation and I am sure that neither I nor you want to embark on such a pleasure journey.

Regarding your political intentions — you are, obviously, free to do as you like within what is legally permitted and, hopefully, within reasonable moral boundaries as well. While I am myself promoting for many years various initiatives for improving the academic system in general and the scientific publishing mechanisms in particular, I doubt I am ever going to support your future party shall it become reality with or, better, without any ultimatums.

Allow me to wish you luck in life and science and kindly ask you to refrain from further communication baselessly mentioning my and my brother's name in any context.

Respectfully,
Alex Bronstein

Artiom Kovnatsky <artiom.kovnatsky@gmail.com>

Tue, Sep 16, 11:00 AM

Alexander,

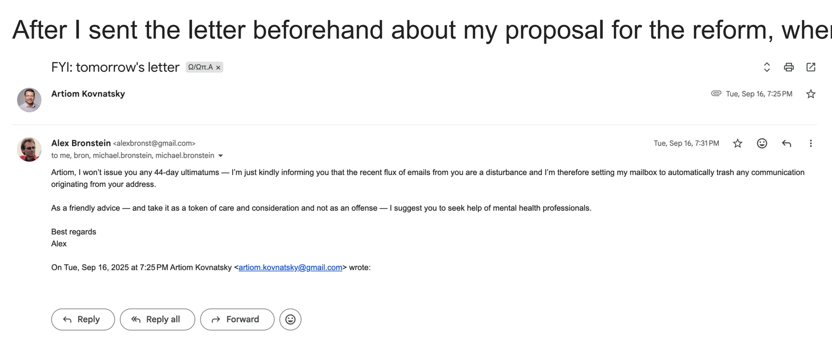
I have received your email. Let me clarify the facts.

1. **On Reproducibility:** The core issue is that the results, as described in the published paper, are not reproducible. After publication, our colleagues (including Davide B. and others) were unable to replicate them by following the stated methodology. This is because the methodology in the paper is a misrepresentation of the work that was done.
2. **On the Disputed Algorithm:** For the record, the algorithm in question **was not used** to generate the final results. I **explicitly warned** Michael of this in writing before submission (circa January-March 2012) and demanded that it be removed from the paper. My warnings were ignored. I suggest you search his email archives for this correspondence.
3. **On the Burden of Proof:** The burden of proof is now on you. I challenge you to provide a complete, step-by-step, verifiable reproduction of the results from scratch, adhering strictly to the published methodology, **particularly for the CVPR paper.**
4. **On My Testimony:** I am fully prepared to defend these statements in any required forum—be it an academic committee or a court of law. I will submit to any validation method necessary, including a polygraph test or verification by the AI systems I have developed. Everything I have written on this matter is the truth.

I urge you to focus on the scientific facts. The truth is the only metric that matters here, not authority or reputation.

To ensure full transparency, I will no longer engage in this discussion via private email. Post any further correspondence or responses to me publicly (e.g., on Twitter). Let the scientific community be the judge.

After I sent the letter beforehand about my proposal for the reform, where I proposed Prof. Michael M. Bronstein as the lead of the committee:



FYI: tomorrow's letter

Artiom, I won't issue you any 44-day ultimatums — I'm just kindly informing you that the recent flux of emails from you are a disturbance and I'm therefore setting my mailbox to automatically trash any communication originating from your address.

As a friendly advice — and take it as a token of care and consideration and not as an offense — I suggest you to seek help of mental health professionals.

Best regards
Alex

Oggetto: A Public Confession of Academic Fraud & A Demand for Systemic Reform

On October 29, 2025, I officially withdrew the CVPR 2015 paper *"Functional Correspondence by Matrix Completion"* from arXiv (https://arxiv.org/abs/1412.8070), stating that its results were fabricated and not reproducible.

This is the first verified act of self-correction — an action, not rhetoric.

Withdraw arXiv article 1412.8070

Functional correspondence by matrix completion

Artiom Kovnatsky, Michael M. Bronstein, Xavier Bresson, Pierre Vandergheynst

Withdrawal requirements and conditions:

1. You must include a reason for the withdrawal. This will be displayed in the Comments metadata and should be specific enough to inform readers what the issue is. For example if there was an error, describe the error and what section of the paper the error appears in.
2. The paper cannot be completely removed. Previous versions will remain accessible.
   - See help pages on: withdrawals, versions and licenses.
   - If you are seeking complete removal please contact our technical support team. Note that complete removals are only considered in cases where the submitter did not have the legal right to post the paper.
3. It is not appropriate to withdraw a paper because it is published or submitted to a journal (see above). Instead you could submit a journal-ref.
4. It is not appropriate to withdraw a paper because it is being updated. Instead you could submit a replacement.

Withdrawal requests that do not meet arXiv requirements will not be accepted.

Reason for withdrawal (Required. Will appear in Comments metadata): "Functional Correspondence by Matrix Completion" (CVPR 2015): This paper, presented at one of the world's top AI conferences, is almost entirely fabricated, and its results are not reproducible.

submit/6936526	Withdrawal of 1412.8070	Functional correspondence by matrix completion	on hold	

I also retract my earlier nomination of Prof. Michael M. Bronstein as a potential member of any reform committee.
Such a position requires absolute service to **Truth, Humanity, and Science**, even when this conflicts with fame, money, or reputation.

Let me be clear: this is **not** a personal conflict.

Professor Bronstein — you embody the System itself: brilliant, adaptive, and skilled in **navigating its rules**.
You once helped me resolve my own military case — proof of your rare ability to *work the system.*

I now ask only this:
If I lied — **show where.**
Provide the full code and data reproducing the first paper and Figure 7 of the second.
Announce a public contest if needed — Truth will decide.

To others involved: I understand dependence on the System.
I do not expect courage — only honesty.
If asked, simply say *"no comment."* Let the amount of falsehood not grow.

This is not about one professor, one student, or one university.
It is about all of us.
If creative minds like the Bronstein brothers must perform instead of explore,
if form continues to outweigh truth,
then **we all lose.**

The New Discipline

Today, I formally present **Systemic Verification Engineering (S.V.E.)** —
the science of designing systems where **lies are not profitable.**

Its first works (*S.V.E. 0 (1–2), I–VI*) are under moderation on arXiv.
They propose reproducible frameworks — from epistemological boxing to the *Protocol for Academic Integrity (SYSTEM-PURGATORY).*

All materials — preprints, AI reviews (GPT-5, Claude, Gemini, Grok, Qwen), and documentation — are open at:
- github.com/skovnats/SVE-Systemic-Verification-Engineering
  - `/Papers` – manuscripts
  - `/Reviews` – independent multi-AI evaluations
  - `/License/signed` – open license for academic and journalistic use

You can also explore the system interactively through **Socrates Bot v0.2**, which hosts nearly all S.V.E. papers (numbers 10, 11, and 12 are still being prepared) and can answer methodological and conceptual questions.

In parallel, I am initiating **PFP (Prüf-Fakten-Partei)** and **Fakten-TÜV** — civic initiatives in Germany extending S.V.E. principles to governance and public verification.

A Call to Collaboration

I have likely reached the **limits of what one person can do**.
The S.V.E. corpus already spans more than 300 pages of new concepts and theories, defining both a framework and a philosophy; building bridges between fields that previously were thought to be impossible to bridge.
Now, I invite collaboration — to refine, extend, and strengthen these ideas.
Imperfections are inevitable; progress is collective.
Perhaps with God, there are no limits at all.

Let us become **co-creators** of a world where verification and integrity are the foundation of progress.

Final Note

Please — there is **no need to form committees or task forces.**
Such gestures are meaningless without a genuine global decision to change the System itself, as outlined in my letter of 17 September.

I will continue the work I have begun.
Each of us will act according to our conscience.
We all have a mirror — I can face mine; the rest is not my responsibility.

No further letters are planned.
Only after **44 months** this message, perhaps with small updates, will be resent as a reminder.

> "Let the unjust continue in injustice;
> let the filthy continue to be filthy;
> let the righteous continue to do right;
> and the holy continue to be holy." — *Revelation 22:11*

Thank you for your time and attention.

P.S. 1

I anticipate that Prof. M. Bronstein may later respond through public statements, interviews, or other media — the next move after the current **"cordon of silence"** (an *information vacuum* strategy), often used in politics and PR when silence is no longer sustainable.
Such responses usually rely on polished rhetoric and familiar techniques: deflection, emotional appeal, authority, prestige, publication counts, and moral framing.

Many of these attributes are real — Michael is exceptionally talented and among the most brilliant people I have worked with.
But not everything that sounds convincing is true.
I hold no institutional authority; **my only authority is Truth.**

Let us not be distracted by words.
The real questions remain:

1. Can the cited papers be **reproduced**?
2. How many such **irreproducible works** exist — especially in medicine?
3. What **mechanisms** now ensure verification?
4. And finally — **who verifies the verifiers?**

P.S. 2

Below is a message from a close friend, formerly a post-doctoral researcher in AI for medical applications (see attached *друг_ии_проблемы_в_медицине.png*).
Those interested may translate it with any AI tool.
It reminds us what is truly at stake:

> *How many innocent people have already suffered from such "inventions" during these forty-four days of inaction?*

Sincerely,
Dr. Artiom Kovnatsky
Mathematician — Systems Thinker

github.com/skovnats/SVE-Systemic-Verification-Engineering
Socrates Bot v0.2
pfp24.de | fakten-tuev.de *(PFP and Fakten-TÜV — in development)*

Appendix (summary)

- **S.V.E.** — a new discipline for designing systems where **lies are not profitable**.
- **AI reviews** — multi-model evaluation conducted by **GPT-5, Claude, Gemini, Grok, and Qwen**.
- **Public access** — all materials, methodologies, and reviews are openly available on GitHub:
  github.com/skovnats/SVE-Systemic-Verification-Engineering
- **Interactive access** — explore concepts through **Socrates Bot v0.2**.
  The bot can translate complex topics — including mathematics, philosophy, and verification logic — into *your own language or discipline*, making it an ideal **entry point** for anyone wishing to understand or contribute.
- **Next phase** — real-world implementation through **PFP (Prüf-Fakten-Partei)**, **Fakten-TÜV**, and related initiatives.
- **Academic submissions** — ongoing work includes preparing and submitting the S.V.E. papers to selected journals and conferences.
  Many of the original drafts were written in a deeply reflective, almost meditative state, and therefore may *feel unconventional* to readers used to standard academic tone.
  I plan to invest time in refining and adapting these works to make their language and presentation more accessible — without compromising their substance or integrity.
- **Personal note** — after several months of intense work, I plan to slow down the pace of development for a while. My health is not perfect, and I have repeatedly pushed myself beyond reasonable limits. It is time to rest, recover, and regain balance — so that the next phase of this work can continue with full strength and clarity.
  For this reason, I warmly invite others to contribute and help carry the project forward — through research collaboration, financial or institutional support, grants, or simply by sharing and discussing these ideas publicly.
  Even a single act — a translation, a publication, or a mention in the media — can help accelerate this collective work.
- **License & custodianship** — the project operates under the **S.V.E. Public License v1.3**, dedicated to Humanity and governed by transparency, proportionality, and restorative justice — never power.
  Anyone acting in good faith may become a **delegate or custodian**, using S.V.E. tools and ideas for the benefit of Humanity, provided they uphold truth, openness, and equal verification standards.
  Use by intelligence agencies, secret services, or covert organizations is strictly prohibited — *unless* they fully commit to **total transparency**, **open publication**, and **service to Humanity as a whole**, under public verification and audit by the S.V.E. community.
  Selective, manipulative, or concealed applications are considered methodological fraud and immediately void all rights.
  The license ensures that truth remains *public property*, not private possession.
- **State of the work** — the S.V.E. theory, papers, and framework are still evolving. They remain *rough* in structure and style; I continue refining and systematizing them as time allows.
  Please understand: I work full-time, have a family, and other responsibilities. I do my best to keep this project alive and growing, even at the limits of personal capacity.
  Constructive collaboration, feedback, and patience are deeply appreciated.

This letter is a verified public communication under the S.V.E. Public License v1.3 — open for republication with attribution.
