My name is Dr. Artiom Kovnatsky, and this is a public confession. I am a co-author on fraudulent papers published at top AI conferences, including CVPR.
CVPR: <https://t.co/NbtUenodm4>

This is NOT just my story. It is the story of a systemic crisis in science, and I am <https://t.co/5mx3IE7Lu2>

A Public Confession of Academic Fraud
& A Demand for Systemic Reform -
artiom.kovnatsky@gmail.com

Dear colleagues,

As a mathematician-scientist at heart and a **taxpayer** who **helps fund** our academic institutions, and an **ex-academic** who knows the system from the inside, I am writing today to demand a **fundamental reform of the academic system**. The foundation of this demand is a crisis of integrity, for which I will now provide evidence, starting with myself.

My name is **Dr. Artiom Kovnatsky** ([Link to Google Scholar Profile](https://www.google.com/search?q=artiom.kovnatsky)). I am a co-author on publications that contain fraudulent data. Specifically:

1. **"Functional Correspondence by Metric Consistency"** (CVPR 2019): This paper, presented at one of the world's top AI conferences, is almost entirely fabricated and its results are not reproducible.
2. **"Coarsened exact harmonic basis"** (ICD 2019): This paper includes a false citation to an algorithm to create the basis of automata, where, in fact, the work was done manually (MSOE Algorithm).

My only justification at the time was that I tried to minimize the scale of falsehoods to the extent my courage allowed. This is also why I categorically refused to include the CVPR paper in my doctoral dissertation (<https://www.google.com/search?q=artiom.kovnatsky>).

But the story of the dissertation itself is yet another example of the systemic problem. My original text was rejected by my advisor at a point in time when independent reviewing was no longer possible. Instead, he personally removed significant parts of the text. Thus, although all research and results in the dissertation are mine, the final written form was not authored by me.

This situation extended to all my publications. I admit I am not a "victim": My strength lies in finding the essence and ideas, not in "backpacking" them. This approach did not satisfy the publish or perish system and consequently, my professors, who himself needed to survive as a beginning academic in the harsh "jungle" we had created, after my first attempt, which disappointed him, he wrote the text of all my subsequent publications himself. I was his first PhD student, the first case on which this system was "refined". Thereafter, he began investing efforts to teach other students how to write or at least that is my perception. This is yet another illustration of how the publish or perish culture forces compromises where form becomes more important than substance, and professors are pressured to focus "only on results" as if academics were an industry or factory.

This is a symptom of the systemic "publish or perish" culture. This crisis is not limited to one field. A colleague using AI in cancer treatment states: "80% of what is now produced at the university is, in part or fully, a low-quality scientific product...". The problem is not the specific professors—they are just a symptom.

This is not an isolated opinion. The recent paper, **"Fraudulent Publishing in the Mathematical Sciences"** (<https://arxiv.org/abs/2504.02073>), highlights we same systemic rot.

This rot is most dangerous in medicine, where fraudulent research directly translates into human suffering and death. Therefore, any systemic change must begin with medical science.

However, this academic crisis is only a symptom of a deeper flaw within our societies.

My research, culminating in the **"Thesis on Preventing Catastrophes in Managed Democracy"**, mathematically demonstrates that the election process in all Western democracies is systematically biased to the point of being **"almost fraudulent"**. Without an **Independent Verification Mechanism (IVM)**, our system is inherently vulnerable to repeating catastrophes like the Holocaust or World War II. You can review the Thesis in my work here: https://www.artiomkovnatsky.com/subdomain_whatnot/ivm/ (Note: the Russian version are the original and most up-to-date, including the earlier articles, it may be best to read them with Google Translate).

This is not a theoretical exercise for me. I am a descendant of Holocaust survivors, whose family members were shot in our "Stalin Yar". My motivation is to ensure **this never happens again**. As a citizen of both Germany and Israel, I have a unique and personal duty to ensure this never happens again.

Therefore, I am issuing a public ultimatum.

As a symbol of historical responsibility, the IVM initiative must begin in **Germany**. If it is not undertaken within **84 days**, I will be forced to create a new political party in Germany. It is mine, with the **"Independent Verification Mechanism (IVM)"** (IVM: Partei für Unabhängigkeit/Verifikation). Its sole political program will be **my Thesis**. Its only goal will be the implementation of this protocol to prevent future catastrophes, after which the party **will be dissolved**.

I hope the political leaders of Germany will show wisdom and make this step unnecessary.

This entire initiative will be made maximally public across all media channels I can reach. Any help in this matter is welcome.

Here is a part of my family's history — a documentary with my grandfather's testimony about the Holocaust and the war: <https://www.youtube.com/watch?v=Cx33Hjwv5M0>.

Sincerely,
