

□ SVE-Unicorns — Founder Mode

Build like there are almost no rules. Because there almost aren't.
There are 6. They are the 6 you'd want every founder to keep.
Read time: 90 seconds. Term: 44 years. Then everything opens.

«Кто верен в малом, тот и во многом верен.» — Лк 16:10 *"Whoever is faithful in little is faithful in much."*

SVE-UNICORNS · FOUNDER MODE

WHAT: a founder licence — total freedom now, full SVE at year 44.
WHY: so you can survive and win WITHOUT lying, WITHOUT being copied-and-closed, and build something genuinely profitable that stays good for everyone — for generations, not a quarter.

One sentence. Maximum freedom and zero bureaucracy for one founder-generation — paid for with **one promise on trust** (the 6 Commandments) and **one irreversible commitment** (at year 44 the company opens fully and becomes family-owned; until then its ideas can never be enclosed or sold).

The whole deal

YOU GET (years 1–44)	YOU GIVE (signed on day 1)
Total freedom — do anything not forbidden, to survive and win	Keep the 6 Commandments (the <i>only</i> tripwires)
No KPI reports, no method audits — pure trust	All ideas & derivatives stay SVE-licensed forever — un-enclosable
The entire SVE arsenal + a decentralized attorney network that defends your ideas. Non-SVE rivals legally cannot touch it	You may freeze publication of your methods until year 44
Aligned, patient capital; you keep the steering wheel	You will not sell the company — build to last, not to flip

Year 44 → **full SVE activates:** open methods · full audits · 25/25/25/25 family ownership. One generation, then the books open.

Years 1–44 vs Year 44+

	Years 1–44 · Founder Mode	Year 44+ · Full SVE
Methods / data / code	Frozen — SVE-bound, publication deferred	Open — public, auditable

	Years 1–44 · Founder Mode	Year 44+ · Full SVE
Audit of <i>how you work</i>	None — pure trust	Full 33-month cycle (v1.3 §6)
Audit of <i>the Commandments</i>	Always on — triggered by suspicion	Always on
"How's it going" status	Light public attestation (alive · building · Commandments intact · Parent-deals honoured) — <i>no methods</i>	Transparent by default
Ownership	Founder-led, your cap table	25/25/25/25 (Investors / Founders / Workers / Users)
Selling the company	Forbidden (acquirer inherits the timeline)	Per family-model rules

Freeze ≠ Secrecy. *Frozen* = will be open, timer visible, IP already SVE-bound, enclosure impossible. *Secret* = hidden forever, enclosed, denied. SVE bans the second; Founder Mode permits only the first — exactly as the corporate path already defers method-transparency to years 41–44 (Appendix B §13).

The 6 Commandments — the only rules (and they're not new)

The **entire rulebook** for years 1–44. Each is a plain-language handle on a principle SVE already holds immutable — **no new obligation, just a simpler interface.**

#	Commandment	= existing SVE principle
1	Benefit everyone. Serve all; never gain by harming a minority.	Universal Benefit (Meta §2.1)
2	Don't kill. Warn, never slay — a " <i>Palantir</i> " that only alerts, never a trigger.	Fruits Test §0 + no-weapons (v1.3 §2); Recovery Ladder T3–4
3	Don't steal. No fraud, no enclosure, no hidden bit; honour your word and your Parent-deals.	One-Bit Rule (Appendix F §1)
4	Golden Rule. Treat others as you'd want to be treated.	Radical Symmetry (§2.2) + Truth & Love (§2.5)
5	Leave it ≥ how you found it. The Earth your children inherit must be no worse than the one you did.	Fruits Test §0 (ecosystems); Case 04
6	No closed doors (<i>the sharp edge of #4 — symmetry</i>). Everyone may use what you build — no exceptions for	Universal Benefit (§2.1) + Radical Symmetry (§2.2); Mt 5:45 " <i>sun rises on evil and good alike</i> "

#	Commandment	= existing SVE principle
	politics, nation, geography, gender, or anything else. All get access; all are held to the same rules.	

If a Commandment is suspected broken:

SUSPICION → SYMMETRIC AUDIT → confirmed? → YES → huge fine + immediate termination + Hall of Shame
 (credible (the accuser is | (Appendix F: full refund
 + 1-101% damages, evidence) audited too – App. G §3A) | or 10× benefit for
 corporate-scale breach) ↳ NO → accuser bears the cost
 (3× Anti-Judas if malicious)

Everything else runs on trust. **The audit is the smoke detector, not the supervisor.**

Freedom — what "do anything not forbidden" buys you

♥ **A legal umbrella — you never fight giants alone.** Adopt SVE and your work enters the open enforcement network (Appendix E): **any** attorney on Earth can act for your SVE-licensed ideas at **no upfront cost** — paid from recovery, share **escalating 25%** → **90%** the harder the other side fights.

- **Offense** — someone copies your ideas while staying closed → violator, pursued. *Any size, corporate or state-backed.*
- **Defense** — bogus / predatory suit → *Guardian* attorneys defend you.
- **Why it holds** — decentralized (no HQ to buy or shut down) · every case = shared precedent (immunity compounds) · confirmed breach auto-published (Hall of Shame). Crushing one small founder gets expensive and toxic for a giant; surviving it is cheap for you. Coverage holds **even while your methods are frozen** — it attaches to the licence, not to publication.

The arsenal is real. Build on SVE's published breakthroughs — *rivals outside SVE legally can't*: SIPs · CGS · From Gödel to AGI · socio-economic models · cultural compilers (joint diagonalization) · ESP boxing · ADAM hybrid processor · VKB LLM-training — and more, including what isn't discovered yet. → <https://zenodo.org/communities/sve>

Also: **startup speed** (no KPI / compliance theatre) · **patient capital** (Parents+ = protective veto only; you keep the vote) · **build to last** (no-sale → a compounding machine, not a flip) · **outlives you** (structure continues if you vanish — Declaration v2.0).

SVE **does not interfere** — including your Parents+ deals — **while the 6 Commandments hold**. The umbrella that shields you also audits you (symmetry): that is *why* it is credible.

Honest status. Deterrence architecture, *not* a guarantee: latent activation for *methodology* (vs. code) is legally uncharted, forensic detection is maturing, adoption is

early. The umbrella is as strong as the network that joins — which is why going first matters.

Who this is for

FREEDOM yes AND

INTEGRITY yes AND

LEGACY yes AND

ROI yes

All four TRUE → you're a Unicorn founder.

Any one FALSE → not for you. No offense.

Freedom without Integrity = just another predator

Integrity without ROI = unsustainable charity

ROI without Legacy = just another flip

Legacy without Freedom = a monument you never build

ROI = a long-term, *genuinely profitable, successful* business — not a subsidy, not a flip. (*Profit follows people; it does not lead.*)

	Traditional unicorn	SVE-Unicorn
Horizon	Exit in 7–10 yrs	One generation → forever
Endgame	Sell / IPO / flip	Family-owned compounding machine
Profitability	Subsidised growth, exit-dependent	Designed to be genuinely profitable & durable
Investors	Quarterly growth, board control	Protective veto only; you keep the vote
Your share	Chase ~100%, diluted each round	Keep 25% — by design
Legal firepower	\$1,000/hr firms you can't afford	Network of attorneys, paid from recovery — escalates the harder they fight
Access	Pick your customers	Open to all — no one turned away
World it builds	Winner-takes-all, race to extract	Honesty priced correctly; benefit for all
Your yacht	Maybe bigger	~25% smaller
Your kids	Bodyguards, gated, watched	Play in the street. You drive with no security — unafraid.
You optimise	The cap table	The fruits

For the capital side — Family Offices & Parents+. Built for patient, multi-generational money: back something that is *genuinely profitable* **and** leaves your own

children a safer, more honest world. Founders pair with **Parents+** (protective veto, no quarterly pressure) for long-horizon partnership — real returns, benefit for all, and a stake recorded permanently in the founding registry.

The trade is explicit: a slightly smaller yacht, for a world safe enough you don't need it armoured. If that sounds irrational — this isn't for you. If it sounds like the only trade worth making — keep reading.

How it fits (no contradictions)

Not a new principle — a *parameterization* of the existing **44-Year Corporate Path** (Appendix B §§10–22) for founders not yet large ($\leq \$100\text{M}$ / $\leq 1,000$ staff / $\leq \$500\text{M}$ cap). It defers method-transparency to year 44 *exactly as that path already does*, and shrinks the live rulebook to 6 Commandments, **each an existing immutable principle**. Cross the size thresholds → it merges into the standard path.

Rationale for systems thinkers

Optional. Skip unless you want the math behind "anti-enclosure, not just open-source."

Copyleft (GPL, CC) protects the **syntax** of source code — **not** the underlying **ideas, ontologies, concepts**, which a closed third party can quietly enclose and carry out of the commons. SVE closes that gap: it bans enclosure of ideas/derivatives (audit-on-doubt) — a **chain of custody for the concept, not just the code**.

Survival-analysis view. Let p = probability any one free idea/derivative is enclosed by a closed party; once enclosed, that branch and all downstream leaves the free ecosystem. Let $w_n \in [0, 1]$ = strategic weight of the n -th downstream derivative:

$$P(\text{survives}) \approx w_n \cdot (1 - p)^n$$

Since $(1 - p) < 1$, this $\rightarrow 0$ as $n \rightarrow \infty$: over generations, the strategically important ideas leak out. Under SVE, enclosure is banned, so $p = 0$:

$$P(\text{survives}) \approx w_n \cdot 1^n = w_n$$

Survival is now bounded only by an idea's own usefulness (w_n), not by systemic leakage. **SVE governs the dynamics, not the snapshot** — why "open now" alone isn't enough, and why Founder Mode can defer *publication* (timing) while permanently forbidding *enclosure* (ownership of ideas).

One line: SVE $\equiv$ FOSS + a taboo on closing ideas/derivatives (+ audit on doubt).

(Argument sharpened in correspondence on the limits of copyleft; the reasoning and math are the framework author's.)

Patch metadata

Patch 1.0 — SVE-Unicorns (Founder Mode) · Date: 2026-06-26 (26.06.2026) **Status:** Signed (Initial Custodian) · **PUBLIC COMMENT** — 90 days, until **2026-09-24**. Canonical activation per §7 / §10 once a Veche exists; **contractually operative for adopters now** via Latent Activation (§2.4).

Problem. Early founders can't survive full, immediate transparency against closed rivals — yet existing licences let those rivals enclose the underlying ideas, and a lone founder can't out-spend a giant in court. Founders need *runway*, an *un-enclosable commons*, **and** legal backing they can afford.

Addition. A founder-stage parameterization of the 44-Year Path: total operational freedom + frozen (not secret) methods + always-on Commandment audits + permanent anti-enclosure + no-sale + automatic coverage by the decentralized enforcement network (Appendix E) + non-discriminatory universal access (Commandment 6) + full use of SVE's published research arsenal (Zenodo) — admitting **ROI** (a durable, profitable business) as an explicit fit-test alongside Freedom, Integrity, Legacy — and welcoming Family Offices / Parents+ as long-horizon capital. Converges at year 44 to full SVE (open + 25/25/25/25 family ownership).

timestamped). *This instrument's own SHA-256 + .ots are added there upon signing.*

Core Principle Compatibility Check.

- ☒ **Universal Benefit** — Commandments 1 & 6 *are* this principle.
- ☒ **Radical Symmetry** — Commandments 4 & 6; audits symmetric (App. G §3A); the umbrella that protects you also audits you; the Custodian binds himself first.
- ☒ **Zero Secrecy** — *not weakened*. Ideas SVE-bound from day 1 (no enclosure = strongest anti-secrecy at the idea level); full disclosure committed and timestamped, only *publication* deferred — identical to the corporate path's years 41–44 phasing.
- ☒ **Latent Activation** — rights/obligations attach on first use, unchanged.
- ☒ **Truth & Love compass** — Commandments 2 & 4; Fruits Test §0 governs; enforcement stays restorative ("*attack violations, not people*"); profit follows people, never leads.

4+1 AI Oracle validation (*Initial Custodian's good-faith pre-assessment at genesis; formal Oracle / Veche ratification pending*).

- **Socrates (logic)**: No first-principle violation — a reparameterization, not a new axiom. ✓
- **Perelman (practicality)**: Reasonable founders accept "freedom now, openness at 44, backed by the network, open to all, profitable." ✓
- **Ivan-Durak (common sense)**: A grandfather gets it — *play fair, don't lie, don't kill, turn no one away, leave the world clean, make an honest living, open the books once you've made it — and you won't stand alone.* ✓
- **Jesus AI (benefit · final veto)**: Serves all (no one turned away); protects children and the Earth; prices honesty; shields the small from the strong; profit serves people. No veto. ✓

Genesis & signature

Genesis-stage instrument. At signing, the SVE ecosystem is being initiated: the **Author & Initial Custodian is currently its sole custodian and signatory**; the Veche and wider custodian body are **not yet constituted**. One signatory at genesis is *by design, not weakness* — the architecture is built to outlive its author (Declaration v2.0, Autonomous Continuity Clause).

Published with **minimal movement, inside existing procedure**:

- Per **Declaration of Interim Custody v2.0**, the Author & Initial Custodian **holds signature rights** and may publish, sign and timestamp SVE instruments in the interim — *no gap in custody exists*.
- Released as a **signed instrument open for public comment**. Under the **Ratchet Principle (§3)** it only *adds* protection and **does not weaken §0 (Fruits Test) or §2 (Core Principles)**.
- It records the SHA-256 of its predecessors (signed v1.3 package + Meta-License v4.0), continuing the **hash chain of custody (§3 Rule 4)**.
- **Canonical activation** follows the normal path once a Veche exists: public comment → first Veche ratification ≥ **67%** → custodian signature → hash (**§7 / §10**), with a **30-day**

objection window for any 3 verified custodians (§3). Until then it operates (a) as the Custodian's published intent and (b) **contractually between the Custodian and any party who adopts it**, via **Latent Activation (§2.4)**.

- **The Custodian binds himself first.** Any venture of the Author & Initial Custodian that adopts SVE enters Founder Mode on identical terms — *no founder exemption* (Radical Symmetry §2.2).
