

On the Asymmetric Use of Human Knowledge

A Personal Address by Dr. Artiom Kovnatsky

Author of the S.V.E. (Systemic Verification Engineering) Framework

DISCLAIMER — ASPE (Art-Scientific Performance-Experiment)

The author is fully aware that his conduct and communications may appear unorthodox — and intentionally so — until the date announced on X:

<https://x.com/ArtiomKovnatsky/status/2044707104045363410?s=20>

Please treat this text, and the broader S.V.E. project, as an **ASPE — Art-Scientific Performance-Experiment**, in the tradition of Diogenes walking through Athens at noon with a lit lantern "looking for Men." Many actions here operate in that register.

On the preprints. The author also acknowledges that nearly all accompanying preprints are raw, unconventional, and do not conform to the formal style of classical academia. They were conceived and written in parallel — as a single live system of thought, composed in prayer (what the author calls the "*Mathematician Prays to God = Father = Our = Jesus*" mode) — and are published as such at:

<https://zenodo.org/communities/sve/records>

Form is secondary. Fruits are primary.

This document is a personal statement of principle — not a technical paper. It accompanies the S.V.E. series and the VKB-Training preprint as a declaration of intent and a warning.

"Let the one who does wrong continue to do wrong; let the vile person continue to be vile; let the one who does right continue to do right; and let the holy person continue to be holy."

— Revelation 22:11

The Problem

Arabic numerals. Gaussian distributions. Galois theory. Fourier transforms. Riemannian geometry. Bayesian inference. Gradient descent. The mathematics powering every AI system on Earth is the collective inheritance of **all humanity**. No civilization built it alone. It emerged across millennia of cross-

cultural exchange: the Indian zero, Persian algebra, Greek logic, Chinese computation, European formalization, and the pattern-recognition traditions encoded in African and Indigenous oral knowledge.

Knowledge belongs to Humanity.

Yet Western civilization has monopolized the infrastructure of intelligence. The most powerful AI systems — built on this shared inheritance — are deployed asymmetrically, in the explicit and declared service of one civilizational bloc.

This is not inference. It is stated policy:

- **Palantir Technologies** — its founder has publicly declared that its mission is to build AI in service of Western civilization specifically, and against its adversaries.
- **Microsoft, Google, Amazon** — provide cloud and AI infrastructure to the military and intelligence agencies of select nations, while the mathematics powering these systems was created by all of humanity.
- **China's social credit system** — deploys AI for mass behavioral control, serving the state against the individual.
- **Israel's AI-assisted targeting systems** — deploy pattern recognition (a field built on contributions from every civilization) for asymmetric military advantage.
- **State AI surveillance (global)** — the widespread use of AI to monitor citizens and control the information space creates a fundamental epistemic asymmetry: the state has full transparency of citizen data, while citizens lack the tools to verify the state's logic and actions. This is a global pattern, not confined to any single jurisdiction or political system.

Every bloc does this. Every bloc is wrong to do so.

The asymmetry is not Western-only. But Western civilization currently holds the dominant infrastructure position, so its monopolization is the most consequential.

The Question

What is the asymmetric use of universal human knowledge in the service of one group against others — if not a form of discrimination?

Not racial discrimination in the 20th-century sense. Something newer: **epistemic-civilizational discrimination** — the monopolization of humanity's collective intellectual heritage for the strategic advantage of a subset.

When the mathematics of Gauss, the algorithms of al-Khwarizmi, and the logic of Aristotle are weaponized to serve one side of a geopolitical divide — while the other sides contributed equally to creating that knowledge — this is not "competitive advantage." It is appropriation at civilizational scale.

Is this not the beginning of a supra-national, ethno-cultural supremacism? Not biological (the 20th-century version), but **informational** (the 21st-century version)?

The S.V.E. Position

The S.V.E. framework takes an unambiguous position:

1. **Zero group-level discrimination.** S.V.E. is built for the benefit of all human beings, without discrimination by ethnicity, nationality, culture, religion, or civilizational bloc. This is not aspirational — it is a license condition.
2. **100% individual-level diversity.** Every individual is unique. S.V.E. respects and preserves individual variation within the framework of universal human dignity.
3. **Asymmetric deployment is a license violation.** Using S.V.E. tools, methods, or derivatives exclusively for the benefit of one culture, nation, or civilizational bloc — or against any group — violates the S.V.E. Meta-License v4.0. This applies equally to Western, Eastern, Chinese, Russian, Israeli, or any other asymmetric use.
4. **Full transparency is mandatory.** Without complete transparency about how the framework is used, by whom, and for whose benefit, the license is void.

The Mathematical Argument

This is not only an ethical position. It is a **mathematical necessity**.

The cultural compiler architecture (S.V.E. VIII, CogOS) discovers universal moral foundations via joint diagonalization of cross-cultural covariance matrices. The procedure requires data from **all** cultures to produce a valid archetypal basis. Excluding cultures mathematically invalidates the result — the orthonormality constraint breaks, and the "universal" basis becomes a provincial projection disguised as universality.

An AI system that claims universality while excluding cultures is not merely unethical — it is mathematically broken.

The shadows on Plato's cave wall look convincing to those who have never seen the light. An AI trained on one civilization's data, deployed in that civilization's interest, and declared "the best" by that civilization's metrics — this is the cave, not the exit.

To Palantir, Microsoft, and Others

S.V.E. is building a world in which the asymmetric, discriminatory use of humanity's knowledge has no place.

We do not come to destroy you. We come to make you unnecessary.

You do not touch S.V.E. — we do our work. God willing, in 444 years there will be no need for Palantirs. Or there will be a single Palantir — one that serves **all of Humanity**, without exception.

Until then: *"Let the one who does wrong continue to do wrong... and let the one who does right continue to do right."* We know which side we are on. You will know yours by its fruits.

If you use ideas from the S.V.E. framework — ontological approaches to AI, epistemic categorization, cultural compilation, or any derivative concept — without adhering to the S.V.E. license:

This is a license violation.

The S.V.E. Public License v1.3 and Meta-License v4.0 are legally binding. They require:

- Full transparency of use
- Non-discriminatory, symmetric deployment
- Revenue sharing with the knowledge ecosystem (see VKB-Training, Section 7)

Violations trigger the enforcement mechanisms described in the license (Appendix E, Attorney Incentive Program).

If your mission is to serve only one civilization at the expense of others — pass by. This is NOT for you.

Whistleblower Program

For individuals with knowledge of unauthorized use of S.V.E. intellectual property:

- Compensation: up to 50% of total damages recovered.
- The case of Edward Snowden shows that whistleblowing carries serious personal risk. Every effort will be made to ensure safety, but readiness for significant disruption — including possible relocation — is required.
- Do not do this for money alone. The risks are real.
- Additional enforcement channels: EU/German courts (S.V.E. jurisdiction), WikiLeaks, and other transparency platforms.

Closing

Knowledge is humanity's commons. Mathematics does not belong to the West, to the East, or to any nation. It belongs to the species that discovered it — collectively, across millennia and every culture.

Any system that takes this commons and deploys it asymmetrically — for one group against others — betrays the very tradition of knowledge it claims to champion.

S.V.E. stands against this. Not with weapons. With mathematics, transparency, and law.

We are building. Slowly. With God's help.

"Very angry dog" (*Domini Canes*) — do not touch.

Author's Final Note — Contingency & Clarification

If the author is suddenly incapacitated, "deceased under anomalous circumstances," or otherwise removed from the project:

1. **Primary reference.** All verification protocols, cryptographic attestations, and the mathematical-notary baseline (SVE-NOTARY) are preserved in the repository — see the mirror list under **Repositories** below. Primary GitHub path is currently **404** (since ~08.04.2026, by GitHub / Microsoft).

2. **Q.E.D. — the price of so-called democracy.**

Zero. (The Indian/Arabic numeral: 0.)

Not a bug. A feature.

Observe: I do not forbid the use of intellectual products. I forbid only their *asymmetric deployment against Humanity*.

That is the entirety of the restriction.

Q.E.D.

3. **Warning.** "1984" is no longer fiction. It is operational.

Be vigilant. Trust no institution. Trust no narrative.

Trust only *fruits* — measurable, verifiable outcomes.

"By their fruits you will know them." — Matthew 7:20

4. **Democratic renewal hypothesis.**

If a majority of those in positions of influence actively oppose transparency, reject accountability, and defend epistemic asymmetry, then perhaps the democratic remedy is not reform, but gradual, lawful, complete renewal of personnel.

Not by violence. By vote. By audit. By the Fruits Test.

A system that cannot self-correct is not a democracy. It is a simulation.

This note is not a threat. It is a timestamped baseline.

If I am silenced, let this text be Exhibit A in the null-hypothesis test:

Was the event consistent with natural causes, or with the suppression of asymmetric transparency?

The protocol runs without me. The idea is released.

Truth does not require a custodian. It requires witnesses.

— Dr. Artiom Kovnatsky (The Revizor)

«ИСТИНА ОСВОБОДИТ ВАС.» — Иоанна 8:32

С БОГОМ! 🙏🏻🔪

Hash this note. Mirror it. Verify it. Then judge the fruits.
